

ALLWELL CHINEMEMMA GODWIN MBA

Curriculum Vitae · Financial Data Science & Quantitative Finance

Lagos, Nigeria | allwellgodwin37@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

PROFESSIONAL PROFILE

Financial data scientist and quantitative analyst working at the intersection of finance, machine learning and applied statistics. Five years of professional experience spanning external audit, financial consulting and production machine learning, with engagements in Nigeria and the United Arab Emirates. Research and practice interests centre on financial anomaly detection, deep learning for financial time series, reinforcement learning for trading strategy, and the application of machine-learning methods to risk measurement and market data.

A background in accounting and audit underpins the technical work: models are developed with explicit attention to documentation, control environment, auditability and regulatory defensibility — qualities frequently absent from purely engineering-led analytics practice.

AREAS OF SPECIALISATION

Quantitative Finance Financial engineering · Derivatives analytics · Stochastic modelling · Portfolio and investment analytics · Statistical arbitrage · Risk modelling

Machine Learning Anomaly and outlier detection · Supervised classification · Predictive modelling · Time-series forecasting · Model validation and monitoring

Deep Learning Recurrent networks (LSTM) for sequence modelling · Convolutional networks and transfer learning · Deep reinforcement learning (PPO) for sequential decision problems

Financial Analytics Financial modelling · Forecasting and scenario analysis · Profitability and cost analytics · Due-diligence analytics · Management reporting

Assurance & Control External audit · Internal control evaluation · Forensic and fraud analytics · Compliance and regulatory reporting

EDUCATION

Master of Science, Financial Engineering Oct 2025 – Sep 2027
WorldQuant University *In progress*

- Programme focus: quantitative modelling, econometrics, stochastic processes, derivatives analytics, portfolio theory and financial machine learning.

Master of Business Administration, Artificial Intelligence Oct 2024 – Aug 2025
Nexford University *Completed*

- Programme focus: artificial intelligence strategy, data-driven decision making, business analytics and technology management.

Bachelor of Science, Accounting Nov 2019 – Aug 2023
Mountain Top University *Completed*

- Programme focus: financial accounting and reporting, auditing and assurance, taxation, management accounting and corporate finance.

PROFESSIONAL EXPERIENCE

Founder & Principal Data Consultant

Aug 2026 – Present

August Marathon Analytics

Lagos, Nigeria

- Founded a quantitative analytics consultancy providing financial modelling, risk and fraud analytics, business intelligence and decision-support systems to corporate clients.
- Advise clients on machine-learning-driven forecasting, transaction anomaly detection and the design of end-to-end analytics architecture, from data ingestion through to executive reporting.
- Direct the full engagement lifecycle: scoping and proposal, technical delivery, stakeholder communication, documentation, handover and post-implementation review.
- Establish the firm's methodological standards, including model documentation, validation protocols and client data-governance practice.

Financial Analyst

Jan 2024 – Aug 2026

OS Professional Services

Ikeja, Lagos, Nigeria

- Conducted in-depth financial analysis and internal control evaluations for corporate clients across multiple industries, identifying control weaknesses and quantifying associated financial exposure.
- Developed data-driven financial reports and reporting dashboards that improved reporting accuracy and strengthened client risk-management frameworks.
- Collaborated with client-side and internal teams to translate technical analysis into actionable strategic recommendations informing budgeting and investment decisions.
- Standardised recurring analytical procedures into reusable models, reducing turnaround time across client reporting cycles.

Financial Data Analyst

Nov 2025 – Feb 2026

Council of International Chambers of Commerce (CICC)

Dubai, United Arab Emirates

- Designed and automated financial analysis workflows in Excel and Python to improve forecasting efficiency and streamline due-diligence processes.
- Analysed complex, multi-source financial datasets to deliver actionable insights that improved client decision-making and operational efficiency.
- Supported financial planning, client onboarding and compliance documentation through structured, data-driven reporting for corporate and individual clients.
- Built financial models and dashboards to track key performance indicators and support strategic planning initiatives across an international chamber network.

Anomaly Detection & Fraud Analytics Intern

Jan 2024 – Jul 2024

SOAIR Africa

Nigeria

- Developed Python anomaly detection models (Isolation Forest, statistical thresholding) to identify suspicious patterns in financial transaction data, improving incident response efficiency by 25%.
- Applied supervised machine-learning classification to financial system monitoring, reducing mean time to detection for high-priority security events.
- Achieved up to 94% classification accuracy on fraud detection models through iterative feature engineering, resampling and decision-threshold optimisation.

Finance Officer

Aug 2020 – Nov 2022

Bamo

Lagos, Nigeria

- Analysed financial and operational data to optimise cost structures, inventory controls and resource allocation.
- Improved operational efficiency by 15% through data-backed process improvements.

- Supported budgeting, financial reporting and performance analysis initiatives, establishing the management reporting cadence.

TECHNICAL COMPETENCIES

Programming	Python · SQL · Jupyter
Deep Learning	PyTorch · LSTM and recurrent networks · Convolutional networks and transfer learning (ResNet-18) · Deep reinforcement learning (Proximal Policy Optimisation)
Machine Learning	Anomaly detection (Isolation Forest, statistical thresholding) · Supervised classification · Predictive modelling · Feature engineering · Model evaluation, validation and threshold optimisation
Quantitative Methods	Statistical data analysis · Econometrics · Financial time-series analysis · Technical indicators (moving average, RSI, MACD) · Risk modelling · Stochastic modelling · Forecasting
Analytics & BI	Power BI · Advanced Microsoft Excel · Dashboard and KPI framework design · Reporting automation · Data pipelines, wrangling and transformation workflows
Financial	Financial modelling · Valuation and due-diligence analytics · Budgeting and forecasting · Profitability and cost analysis · Internal controls · Audit analytics

PROFESSIONAL CERTIFICATIONS

- IBM Data Science Professional Certificate — IBM
- Machine Learning with Python (with Honors) — IBM
- Databases and SQL for Data Science with Python (with Honors) — IBM
- Foundations of Financial Engineering — WQU
- IBM AI Engineering Professional Certificate — IBM
- Business Analytics — The Wharton School, University of Pennsylvania
- Google Advanced Data Analytics Professional Certificate — Google
- Google Business Intelligence Professional Certificate — Google

SELECTED TECHNICAL PROJECTS

Full code and documentation for the projects below are available at knightallwell.github.io and github.com/knightallwell.

Deep Reinforcement Learning Trading Agent Algorithmic Trading

- Built an automated trading agent using Proximal Policy Optimisation (PPO), a policy-gradient deep reinforcement learning method, to optimise entry, exit and position-sizing decisions.
- Benchmarked agent performance against conventional rule-based trading strategies to assess whether learned policies outperform static heuristics.
- Methods: deep reinforcement learning, policy optimisation, reward shaping, backtesting.

Market Movement Forecasting with LSTM Networks Predictive Modelling

- Developed LSTM recurrent neural networks to forecast directional market movement from historical price series.
- Engineered technical-indicator feature sets — moving averages, Relative Strength Index (RSI) and Moving Average Convergence Divergence (MACD) — as model inputs alongside raw price data.
- Methods: recurrent neural networks, time-series forecasting, technical analysis, feature engineering.

Machine-Learning Fraud Detection System Anomaly Detection

- End-to-end anomaly detection pipeline over financial transaction data, combining unsupervised Isolation Forest with statistical thresholding and supervised classification.

- Achieved up to 94% classification accuracy through iterative feature engineering and decision-threshold optimisation; deployed to improve incident response efficiency by 25% and reduce mean time to detection on high-priority events.
- Methods: unsupervised anomaly detection, supervised classification, imbalanced-class handling, threshold tuning.

Structural Defect Classification for Safety Assessment

Computer Vision

- Applied PyTorch and ResNet-18 transfer learning to classify structural cracks in building imagery, automating a manual visual-inspection process.
- Reduced inspection time and improved consistency of assessment relative to manual review.
- Methods: convolutional neural networks, transfer learning, image classification, model fine-tuning.

Predictive Launch-Outcome Analysis

IBM Applied Data Science Capstone

- End-to-end data science pipeline covering data collection via API and web scraping, wrangling, exploratory analysis, interactive visualisation and predictive classification of launch outcomes.
- Identified operational efficiencies and built predictive models for deployment success.
- Methods: data acquisition, EDA, interactive dashboards, classification modelling.

Automated Financial Forecasting Workflow

Process Automation

- Python and Excel automation replacing a manual forecasting and reconciliation process for an international chamber of commerce network, reducing due-diligence cycle time and eliminating recurring manual data preparation.

SQL Data Manipulation & Business Intelligence Dashboards

Data Engineering & BI

- SQL data cleaning, transformation and querying pipelines supporting business intelligence reporting.
- Interactive Python dashboards surfacing business trends and anomalies for non-technical stakeholders.

THOUGHT LEADERSHIP & PUBLICATIONS

Founder & Author, Allwell Writes

Aug 2026 – Present

- Long-form writing on financial analytics, fraud detection and the practical intersection of finance and artificial intelligence.

Creator, Audit2Alpha (YouTube)

Ongoing

- Channel covering financial analytics, data science and quantitative analytics, aimed at analysts moving from traditional finance into quantitative and data-driven roles.
